

EMG Build01- H8020002 - Arquette, Darren

I created a small low Poly model, seen on the bottom right, of picture 4 & 5. Image 2 provided me with the simple idea of creating the building by extruding a box up rather than make the walls and then try and figure out how to make them point out a bit to build up again.

The two remaining images are an inspiration for what I want to later do with my model, like adding extra detail and extra objects onto it like the drain pipe and chimney.
